

Ex 2 :

REACT COMPONENT :

A React Component is a reusable and independent piece of the user interface. It is usually a JavaScript function that returns JSX. Components help break a complex UI into smaller, manageable, and reusable parts, making applications easier to develop, maintain, and test.

CODE :

[Home.js](#)

```
import React, { Component } from 'react';

export class Home extends Component {
  render() {
    return (
      <div>
        <h3>Welcome to the Home Page of Student Management
Portal</h3>
      </div>
    );
  }
}
```

[Contact.js](#)

```
import React, { Component } from 'react';

export class Contact extends Component {
  render() {
    return (
      <div>
        <h3>Welcome to the Contact Page of the Student Management
Portal</h3>
      </div>
    );
  }
}
```

[About.js](#)

```
import React, { Component } from 'react';

export class About extends Component {
  render() {
    return (
      <div>
        <h3>Welcome to the About Page of the Student Management
Portal</h3>
      </div>
    );
  }
}
```

[App.js](#)

```
import React from 'react';
import { Home } from '../Components/Home';
import { About } from '../Components/About';
import { Contact } from '../Components/Contact';

function App() {
  return (
    <div style={{ textAlign: 'center', marginTop: '50px' }}>
      <Home />
      <About />
      <Contact />
    </div>
  );
}

export default App;
```

Output :

Welcome to the Home Page of Student Management Portal

Welcome to the About Page of the Student Management Portal

Welcome to the Contact Page of the Student Management Portal
