

Ex 1 :

1. What is SPA?

SPA stands for **Single-Page Application**. It is a web application that interacts with the user by dynamically rewriting the current page rather than loading entire new pages from the server.

Benefits of SPA

- Faster navigation and better user experience
- Less data transfer between client and server
- Easier to convert into a mobile app (using frameworks like React Native)

2. What is MPA?

MPA stands for **Multi-Page Application**. In MPAs, each interaction loads a new page from the server.

Differences: SPA vs MPA

Feature	SPA	MPA
Page Reload	No	Yes
Speed	Faster after first load	Slower due to full page reload
SEO Support	Less optimal	Better
Example	Gmail, Facebook	Amazon, Flipkart

3. What is React?

React is a **JavaScript library** developed by Facebook for building **user interfaces**, especially SPAs. It helps create **reusable UI components**.

4. What is Virtual DOM?

The **Virtual DOM** is a lightweight copy of the real DOM. React uses it to:

- Detect changes
- Minimize direct DOM manipulation
- Update only what's necessary in the real DOM

5. Features of React

- **Component-based**
- **Virtual DOM**
- **Declarative UI**
- **Unidirectional Data Flow**
- **Fast Rendering**
- **JSX Syntax**

Code :

```
function App() {  
  return (  
    <h1>Welcome to the first session of React</h1>  
    </div>  
  );  
}  
  
export default App;
```

Output :

Welcome the first session of React
