

EX 4:

REACT COMPONENT CYCLE :

The Component Lifecycle is the sequence of stages a React component goes through from the time it is created until it is removed from the screen.

THREE MAIN LIFE CYCLE PHASES :

1. Mounting Phase
2. Updating
3. Unmounting Phase

Lifecycle Phase	Class Component	Functional Component
Mounting	componentDidMount()	useEffect(() => {}, [])
Updating	componentDidUpdate()	useEffect(() => {}, [dependency])
Unmounting	componentWillUnmount()	Cleanup function inside useEffect

CODE :

[POSTS.JS](#)

```
import React from 'react';
import Post from './Post';

class Posts extends React.Component {

  constructor(props) {
    super(props);

    this.state = {
      posts: []
    };
  }
}
```

```

loadPosts() {
  fetch("https://jsonplaceholder.typicode.com/posts")
    .then(response => response.json())
    .then(data => {
      this.setState({
        posts: data
      });
    });
}

componentDidMount() {
  this.loadPosts();
}

render() {
  return (
    <div>
      {
        this.state.posts.map((post) => (
          <div key={post.id}>
            <h2>{post.title}</h2>
            <p>{post.body}</p>
            <hr />
          </div>
        ))
      }
    </div>
  );
}

componentDidCatch(error, info) {
  alert(error);
}

export default Posts;

```

[POST.JS](#)

```

class Post {
  constructor(id, title, body) {
    this.id = id;
    this.title = title;
  }
}

```

```
    this.body = body;
  }
}

export default Post;
```

APP.JS

```
import './App.css';
import Posts from './Posts';

function App() {
  return (
    <div className="App">
      <Posts />
    </div>
  );
}

export default App;
```
